**Subject:** Possible North Lily Overflow Pond Repairs

This afternoon I received a call from Walt on the pond condition at North Lily. He said that he was having Rainy Day Liner Repair Company come out to the site Saturday the 16th. He is having them give him a bid on repairing the liner enough to give a four foot area of storage capacity in the bottom of the pond. He is having them bring a crew and if the bid is right he will have them do it while they are there. Walt will have a crew there working and if Rainy Day repairs the pond, he will sand bag the upper edges of the tears.

He mentioned that they had hooked up the new pump, it turned several revs and died. He says he has a new pump at Barrick and he'll bring it over and hook it up. It is a 3 phase pump so he's not sure that power is available at the site.

I called and informed DWQ (Beth and Dennis) of the plan. I didn't want North Lily spending the money if DWQ had decided to stop them from using the pond already. No decision had been made on DWQ's part yet. They felt that the repairs could get us through.

Chapter six of this drama is presently being written.
